

# Tax Returns ROI Calculator Full Results

Current Spend (\$)

\$150,000

Avalara Investment (\$)

\$1,100

Savings by switching to Avalara

1%

\$148,900

If you do your sales and use tax returns in-house, the calculator's math is easy:

- Number of Tax Returns You File Each Month X Number of Hours You Spend on Your Tax Returns Each Month X Your Hourly Pay = Your Current Costs

If you use an external accountant, the math looks like this:

- Number of Tax Returns You File Each Month X Number of Hours You Spend on Your Tax Returns Each Month X \$50 (Industry Average Hourly Rate for Tax Accountants) = Your Current Costs

How does Avalara pricing work?

- Avalara charges a flat rate based on the number of returns you file. The more you file, the more savings you receive!
